

NEW CENTER STAMPING, INC.

A Minority Business Enterprise

Letter of Recommendation

During the fall and winter of 2014/15, Steelsmith manufactured and erected a 44,000 ft² shipping building for New Center Stamping (located in Detroit, Michigan). My assessment and observations regarding their project performance is as outlined below:

- Price was competitive.
- They accommodated our schedule changes with minimal cost impact.
- Dimensional accuracy of fabrication was excellent – which greatly enhanced the efficiency of erection.
- Quality of initial workmanship was excellent (and I assume they will stand behind any potential warranty needs).
- The work ethic and efficiency of their erection crew was excellent (which was no small challenge during rather arduous winter weather conditions).
- Ongoing communication regarding timing and project status was excellent.
- Project was completed on schedule.

In summary, predicated on this project performance, I would highly recommend Steelsmith for any other similar endeavor.
